Drowning Is Preventable

The Texas weather is warming up. Summer is almost here. Pools will soon open and the cool water will be calling your name. You can almost hear your kids laughing and the playing in the pool. Your family deserves to have many Best Day Ever moments in the water this summer. Please do not let those moments be ruined by the sound of a life guard whistle blast or the need to do CPR in order to save your child's life. Most families love a trip to the swimming pool, the lake or the beach during the summer...but the water can be deadly for a child.

Did you know that drowning is a leading cause of accidental death for children between the ages of 1 and 14, with kids under the age of 5 at even higher risk?

Colin Holst's parents did not know either. Sadly, June 13th marks the 5 year anniversary of his drowning in a public, lifeguarded pool in Austin. Since Colin's drowning in 2008, Central Texas-based Colin's Hope has become a nonprofit leader in water safety and drowning prevention.

My name is Alissa Magrum and I am the Executive Director of Colin's Hope. But I am also a parent to 8 year old Ella. So, from one parent to another, please listen to this message. It is simple but filled with purpose: DROWNING IS PREVENTABLE. YOU can help protect your children. Following a series of simple water safety tips creates multiple layers of protection. These layers WILL keep children safer in and around the water and CAN prevent drownings.

THE FIRST 3 OF THESE TIPS ARE KEY.

Practice constant visual supervision. Always assign an adult "water guardian" whose ONLY responsibility is to watch children who are in, near and around the water. If that water guardian needs to take a break, they must transfer their "watching" duty to another adult.

Learn to swim. Enroll children (and adults too) in formal swim classes. For kids under the age of 4, taking formal swim lessons reduces the risk of drowning by 88%.

Wear life jackets. Children who cannot swim should ALWAYS wear a U.S. Coast Guard-approved life jacket when in and around the water.

You can see additional tips, as well as more information on water safety and drowning prevention, on our website at www.colinshope.org.

Each year, Colin's Hope volunteers stuff and distribute 75,000 water safety packets to families in zip codes that have been targeted due to the high number of near drownings and drownings in recent years. This life saving information along with a Peel Inc. ad campaign, a Reagan National Advertising billboard campaign and a presence at many community events is helping to raise water safety awareness to prevent children from drowning.

WE ALSO NEED YOUR HELP. PLEASE SHARE THIS INFORMATION with family, friends, neighbors, teachers, babysitters...everyone! We have seen the difference that being aware and being prepared can make. Communities that have received our water safety information in prior years have seen child drownings and near drownings in their areas reduced to zero!

Please visit www.colinshope.org to find out how you can get involved in your own community. Find us on Facebook, follow us on Twitter, subscribe to our monthly newsletter or even support our efforts with a donation.

We envision a world where children do not drown. Please share that vision and together we will get there.

*Wishing you the SAFEST AND BEST SUMMER EVER,
Alissa Magrum Executive Director, Colin's Hope*

Sinuses Can Be a Pain in the Head, Not Neck

That troublesome headache might not be a migraine or brought on by tension. It could be caused by sinus trouble, said doctors at Baylor College of Medicine.

"The sinuses work to humidify and cleanse the air, lighten the weight of the skull, and provide resonance to the voice. Sometimes, the sinuses fail to function correctly, leading to sinus pain caused by an infection or nasal congestion," said Dr. Mas Takashima, assistant professor of otolaryngology at BCM and director of the Baylor Sinus Center. Sinus headaches usually occur along with congestion. Many things can cause sinus pressure and pain, such as sinus infections, nasal allergies, nasal polyps, septal deviations as well as enlarged vascular structures in the nose called turbinates.

"Sinus pain can also be exacerbated by the weather or even plane travel as the pressure changes in the air around you," said Takashima.

Therapy is based on cleansing and decongesting the nose. This can be accomplished with something as simple as nasal irrigation using salt water. Steam, as found in a hot shower, may also provide decongestion and relief. If the problem is caused by infection then antibiotics are used. If it is allergy related, allergy medications may be prescribed. Occasionally surgery is required to keep the passages open.

SNAKE BITES A CONCERN AS WEATHER WARMS UP

Warmer weather coaxes snakes out of hiding, and it's important to know what to do after a snake bite, according to a medical toxicologist at Baylor College of Medicine (www.bcm.edu).

"Many people don't realize how much of an issue snake bites are in this area of the country," said Dr. Spencer Greene, director of medical toxicology and assistant professor of medicine – emergency medicine at BCM. "In fact, our regional poison center reported 235 snake bites – including 148 from known venomous snakes – in the Houston area in 2012, and I am sure many more are going unreported".

According to Greene, the first step is avoidance.

"Never reach into a hole or a bush blindly, a snake may be resting there," he said. "It is also important to maintain an appropriate distance from a snake. Most pit vipers, which include rattlesnakes, copperheads and water moccasins, can strike at a target up to two-thirds of their body length when provoked."

If you are bitten by a snake, Greene suggests the following important steps:

- Stay calm.
- Call 911 immediately to be evaluated.
- Take off anything that is constricting the affected area, such as a ring or watch.
- Position the affected area at or above heart level. This means that if you are bitten on the hand, bring it to heart level, and if you're bitten on the leg or foot, elevate it if possible. This minimizes the amount of local tissue damage and swelling, which is the most common finding in pit viper bites.
- Go to the emergency room – the sooner the better.

Greene also dispels several myths about treating snake bites and suggests heeding the following advice:

- Do not apply a tourniquet or a constriction band.
- Do not apply ice; it can cause local tissue damage.
- Do not apply heat.
- Don't cut the affected area and attempt to suck the venom out – this increases the amount of local tissue damage.

- Don't use a commercially-available extraction device. These have also shown to be ineffective in removing venom and actually increase the amount of tissue damage.
- Don't use electrical therapy.
- Don't apply any type of lotions or ointments.

The management of snake bites has changed over the years and the newer type of anti-venom has proven to be very effective in reducing pain, bleeding complications, swelling and tissue damage, Greene says. Although anti-venom has been shown to have the maximum effectiveness within the first 12 hours of the bite, it can still be effective a few days after the bite.

At the hospital, physicians will determine if anti-venom and hospital admission is necessary.

"Ideally, patients should be evaluated by a medical toxicologist with experience in managing snake bites," Greene says.

If a patient requires anti-venom, he or she usually spends one or two days in the hospital. After hospital discharge, patients will need to follow up twice a week for two weeks to watch for any signs of recurrent toxicity.

ADOPTION COALITION OF TEXAS

Marcus

05/1997

Marcus is a smart, funny and passionate young man. He is a thinker and a planner who likes to explore new ideas and gain knowledge. He likes to write and listen to rap music. Marcus craves acceptance and responds well to positive attention from adults. He is determined to have a bright future and works hard to reach his academic potential.

Marcus wants very much to be adopted so that he can have a family to love and support him in the future. His adoptive family needs to be nurturing, firm, patient and willing to provide him with much needed one-on-one attention. Marcus will do best in a family with older children and one with parents that can help build his self-esteem while encouraging him to discover his strengths and find his place in the world.

For more information on Marcus, please contact Stephanie Berka at the Adoption Coalition of Texas by email stephanieberka@adopttexas.org or by phone: 512-450-8750.

Seton Care For Your Entire Family

As the leading provider of health care services in Central Texas, the Seton Healthcare Family is proud to offer a full continuum of care for your family. Our primary care clinics provide a wide range of medical services to improve the health and wellness of infants, children and adults:

- Primary family care
- Physicals and sports exams
- Well-woman annual exams
- Diabetes care and prevention
- Blood pressure and cholesterol management
- Minor emergency care
- Disease management
