# 10 POWERHOUSE FOODS

## THAT WILL HELP YOU BURN FAT IN THE NEW YEAR

*Marissa Balch - CPT, Nutrition Coach - Texas Fit Chicks Boot Camp*

1. Oatmeal - Great source of soluble fiber and slow-digesting carbohydrates that will keep blood sugar and insulin in check so fat burning can stay high.

2. Eggs - A form of well-absorbed protein, healthy fats and Vitamin D (found in the egg yolk). Eggs also contain lecithin, which promotes healthy liver function, thereby helping the body to burn fat.

3. Salmon - High in omega-3 fatty acids, salmon reduces inflammation in the body and lowers LDL and triglyceride levels while raising good HDL levels. Salmon also has a beneficial effect on leptin (hunger hormone) levels in the body, which means it helps to suppress your appetite.

4. Nuts - Another source of fiber and rich in omega-3s, these fats help to regulate blood sugar and protect the heart and the immune system.

5. Grapefruit & Berries - These fruits contain slow-digesting carbs and are rich in fat-fighting fiber. Strawberries, raspberries, blueberries and blackberries all are loaded with soluble fiber and antioxidants that protect blood vessels and promote healthy blood flow.

6. Avocado - It's got fat, yes, but the good kind! The monounsaturated fats found in avocado are burned readily for fuel during exercise and actually encourage fat burning. Good source of fiber and antioxidants.

7. Leafy Greens - Broccoli, specifically, is a fibrous carb that can make you feel full quickly—one reason why it's a great food for getting lean. Broccoli also contains phytochemicals that can help enhance fat loss.

8. Cinnamon - Helps to reduce blood sugar levels, which in turn prevents the body from storing sugar as fat. Add it to your oatmeal and yogurt to enhance flavor without adding calories.

9. Green Tea - Drink this! Not only is green tea packed with antioxidants, it also contains catechins, a phytochemical that helps speed up metabolism and burn more fat.

10. Beans & Legumes - Great sources of protein and they normalize insulin levels and help keep your blood sugar steady throughout the day. Black beans, Garbanzo beans, red beans and lentils are all great to incorporate into your diet.

# Wintry Wanders

NATUREWATCH *by Jim and Lynne Weber*

As temperatures cool further and autumn turns to winter, our thoughts turn to visions of ice and snow. From first frost to ice storms to snow storms, these frozen precipitation events are sporadic in Central Texas, but when they occur, they can also be spectacular!

How does frost, this sparkling layer that sometimes covers the landscape, form? When the temperature of the air reaches a point where the water vapor in it can condense out into water, it is called the dew point. The frost point is when the dew point falls below freezing, and rather than producing dew, it creates frost. Consisting of tiny, spike-like crystal structures called 'spicules' that grow out from a solid surface, frost generally forms on surfaces that are colder than the surrounding air. Even the size of the crystals can vary, depending upon the amount of time they took to grow, the relative changes in temperature, and the amount of water vapor available.

Cold air is denser than warm air, so quite often when night skies are clear and calm, lower areas become colder due to differences in elevation. Known as surface temperature inversion, this phenomenon forms 'frost pockets' or areas where frost forms first, due to cold air trapped against the ground. On such days, there can be a 40 to 50 degree difference in air temperature between dawn and early afternoon. Getting out early can reward you with a rare and wonderful spectacle of nature when something called 'hoar frost' is formed.

Referring to white ice crystals that are deposited on the ground or loosely attached to exposed objects such as leaves and branches, hoar frost forms on cold, clear nights when heat radiates out to the open sky faster than it can be replaced by nearby sources such as wind. This allows objects in the landscape to cool below the frost point of the surrounding air, and well below the freezing point of water. Hoar frost can form in low-lying cold air even when the air temperature a few feet above ground is well above freezing. The name 'hoar' comes from an Old English adjective meaning 'showing signs of old age', and refers to the frost making the vegetation look like it has grown white hair. When hoar frost forms on objects above the surface, like branches and leaves, it has a feathery-like appearance and is specifically called air hoar.

Snow, on the other hand, is an entirely different matter. When a cold water droplet freezes onto a pollen or dust particle high in the sky, it creates an ice crystal. As this primary crystal falls toward the ground, more water vapor freezes on it, building new crystals that form the six characteristic arms of a snowflake. This process of crystallization builds in a symmetrical or patterned way, because it reflects the internal order of the water molecules as they arrange themselves in pre-determined spaces to form the six-sided snowflake.

The most significant factor that determines the basic shape of the ice crystal is the temperature at which it forms, and to a lesser degree humidity. The intricate shape of a single arm of a snowflake is determined by these atmospheric conditions as the entire crystal falls. As slight changes in

*Hoar frost on barbed wire*

*Snow crystal forms*

temperature and humidity occur minutes or even seconds later, a crystal that begin to grow in one way might then change and branch off in a new direction. Since all six arms of a snowflake experience the same changes in atmospheric conditions, they all grow identically. And since individual snowflakes encounter slightly different atmospheric conditions as they take different paths to the ground, they all tend to look unique, resembling everything from simple prisms and needles to intricately faceted plates and stellar dendrites.

On the surface, winter may seem as if nature is shutting down around us, but take the time for a second look. Aside from the visual beauty they provide, the frosts and snows of the season are just another part of the ongoing cycle of life and renewal for our native plants and animals.

Send your nature-related questions to [naturewatch@austin.rr.com](mailto:naturewatch@austin.rr.com) and we'll do our best to answer them. Check out our blog at [naturewatchaustin.blogspot.com](http://naturewatchaustin.blogspot.com) if you enjoy reading these articles!

# TEXAS A&M AGRILIFE

Fruit flies can become a problem at any time of year because they are attracted to ripe or fermenting fruit. Fruit flies can be brought into the home from ripe fruits or vegetables picked from the garden or items purchased at the grocery store.

Adults are small (about 1/8 of an inch) and usually have red eyes. The front portion of the body is tan while the back portion is dark brown or black. If given the opportunity, females can lay up to 500 eggs. Larvae feed near the surface of fermenting foods or other organic matter.

Prevention is the best way to deal with fruit flies. Do not purchase over ripened fruit or vegetables. Fruit and vegetables should be eaten in a timely manner or stored in the refrigerator. If storage in the refrigerator is not an option because you are ripening the item, place it in a paper bag and use a clothespin or chip clip to close the bag. All recyclables should be rinsed thoroughly before placing them into the recycling bin. The recycling bin and garbage can should be cleaned out on a regular basis to eliminate any spilled material.

# FRUIT FLIES

To eliminate a fruit fly infestation, all sources must be located and eliminated. Insecticides will not help if sources are not eliminated. While searching and eliminating breeding sources, a trap can be constructed to capture adult flies. Create a paper funnel by rolling notebook paper and place the funnel into a jar that contains a small amount of apple cider vinegar in the bottom.

For more information or help with identification, contact Wizzie Brown, Texas A&M AgriLife Extension Service Program Specialist at 512.854.9600.

## Chicken Enchilada Soup

**Sauté in large pan:**

- 1 small onion, chopped
- 1 clove garlic, crushed
- 2 Tbs. vegetable oil

**Add & simmer 1 hour:**

- 1 - 4 oz. can chopped chilis, undrained
- 1 - 14 ½ oz. can beef broth
- 1 - 14 ½ oz. can chicken broth
- 1 - 10 ¾ oz. cream chicken soup
- 1 - 6 ¾ oz. can chicken
- 1 ½ cup water
- 1 Tbs. steak sauce
- 2 tsp. Worcestershire sauce
- 1 tsp. cumin
- 1 tsp. chili powder
- 1/8 tsp. pepper

**Then add and simmer for 10 more minutes:**

- 3 cups shredded cheese
- paprika
- 6 corn tortillas, cut in 1/2" strips

**Serve with tortilla chips.**

## The Modern Game: The Forehand Return Serve Drop Shot

In previous newsletters, I offered tips on how to execute the basic strokes for players who are just beginning to play tennis or who want to resume playing.

I am now offering suggestions on how to play the “modern” game mostly geared towards players who are happy with hitting the ball over the net and controlling the point with consistency. These players may already be playing for leagues or in tournaments and are looking for more “weapons” on the court.

In this issue, I will offer instructions on how to execute “The Return Serve Drop Shot.” This shot is used when an opponent is expecting a deep service return and the player “surprises” the opponent with a short angle drop shot. It can be used in both singles and doubles play.

In the illustrations, Fernando Velasco, Director of Tennis and teacher at of the Grey Rock Tennis Club, shows the proper technique to execute this stroke. Velasco is presently ranked #1 in Singles and Doubles in the USTA Men’s 70 Division in Texas, and #13 in Singles

and #8 and #10 in Doubles in the US.

**Step 1: The Back Swing:** When Fernando sees the opportunity, he makes a quick turn of his upper body and takes the racket high and back. The head of the racket is now at shoulder height, his shoulders are turned, and his eyes are focused on the incoming ball.

**Step 2: The Point of Contact:** The success of the drop shot is to “cup” under the ball with the strings. The grip is relaxed and ready to push the ball forward and under the ball as he makes contact with it. His left shoulder is almost opening and his weight is moving through the shot.

**Step 3: The Follow Through:** In order to get maximum underspin, Fernando is keeping the right hand extended as long as possible. His weight is going forward. The left hand is left leaning forward for better balance.

As the shot goes over the net, and it was successful, Fernando will run towards the net, expecting his opponent to either lift the ball short, or try to drop shot his drop shot.

*Look in the next Newsletter for: “The Backhand Return Drop Shot”*
