Sunday and Monday Closed

Fitness Center Hours
7 days a week 5:00am until 11:00pm

Please visit of contact this office to register for amenity and gate access.
Many of us regularly recycle soda cans and water bottles, but did you know that many other food and beverage containers and household items also are recyclable? Take a look at the list below for some guidelines for what you can put into your community-provided recycling bin and what should be handled by a waste management professional.

Metal. Aluminum cans, foil and bakeware all are recyclable, as well as steel and tin cans used to package food and beverage items. Ensure these items are free of any food particles prior to putting them into your recycling bin—if they’re dirty, recycling facilities may not accept them.

Paper and cardboard. Computer paper, phone books, junk mail, magazines, paperback books, newspapers and cardboard all are fully recyclable and typically can be made into other paper products like egg cartons and packaging forms. Poly-coated paperboard materials like milk and juice boxes also can be recycled.

Glass. Most clear, brown and green glass items used for food and beverage items are recyclable and can be broken down and made into other glass products. However, some glass items like ceramic dishware and ovenware, heat-resistant glass, mirror or window glass, or crystal are not recyclable.

Plastic. Clean plastic items in the shape of bottles, jars and jugs are almost always recyclable, but plastic bags are not. Typically, grocery stores collect plastic bags for recycling facilities that specialize in producing recycled plastic lumber.

Batteries and Bulbs. Car, household and rechargeable batteries are recyclable, but most waste management companies will not accept them via community recycling bins. Along with incandescent, LED and fluorescent light bulbs, these items require special handling. Check the county website for recycling information.

Electronics. Computers and computer accessories, cell phones, stereos, televisions and printers are all nearly 100 percent recyclable, but should be handled by a waste management professional rather than put out at the curb with the rest of your recycling. Check the web for local retailers and manufacturers that offer recycling programs for these items.
**TRASH**

**IMPORTANT INFORMATION**

**REMEMBER:** Unless it is trash pick up day, your trash cans (and any bags of trash) must be hidden from public view. Please do not store your trash cans in front of your garage or on the side of your home – your neighbors don’t want to look out their windows and see your garbage either.

**STERLING LAKES TRASH PICK-UP SCHEDULE**

Wednesday & Saturday - Trash containers must be at curb by 7AM on Wednesdays and Saturdays. Recycle bins are picked up on Saturdays.

Note: Heavy pick-up day - Saturday

Service Provider: Waste Management – (800) 800-5804
Is It a Turtle or a Tortoise?

By Cheryl Conley, TWRC Wildlife Center

Turtles are identifiable by their webbed feet and long claws. The webbing helps them swim. The tortoise has a heavier shell than the turtle and has short sturdy legs. Turtles are omnivores meaning they eat vegetation and meat. Tortoises tend to be herbivores but have been known to occasionally eat meat.

Both turtles and tortoises date back 220 million years! They both have a very long lifespan with sea turtles living up to 70 years and the more common turtles living up to 40 years. Tortoises can live up to 150 years!

Red-eared slider turtles became popular as pets when they were made available in dime stores. I know I had one in the 1950’s so they’ve been around a very long time! Their popularity soared when the Teenage Mutant Ninja Turtle movie came out. Because the turtles were released into the wild when pet owners got tired of them, they are now considered invasive in some states. A couple of states have outlawed the sale of them. These turtles tend to be a bit aggressive and make it difficult for other native species to compete for food and habitats. They can also introduce unknown diseases to the wild population when pet turtles are released into the wild.

Probably the most unique turtle in our area is the softshell turtle. They live in the water and are carnivores. It has a flat shell and will often bury itself at the bottom of a lake, stream, or bayou leaving only its neck and head exposed. It can breathe under water much like a fish.

TWRC Wildlife Center cares for hundreds of turtles every year. Most are admitted because of injuries sustained from cars. In 2014, concerned citizens asked Missouri City to help protect turtles crossing the road. The City took a positive step by erecting road signs showing a mama turtle with three babies.

TWRC Wildlife Center is a 38-year-old non-profit organization that is your resource for wildlife questions and concerns. Check out our website at www.twrcwildlifecenter.org or give us a call at 713-468-TWRC.

Crane Flies

Crane flies are surrounded by misinformation and misnomers. Some think that adult crane flies eat mosquitoes, but this is untrue. Adult crane flies feed on nectar or are non-feeding. Also, crane flies are sometimes referred to as “mosquito hawks” which is a misnomer. The name mosquito hawk is most often used to refer to dragonflies, but sometimes is also used to refer to a large species of mosquito with a larval stage which feeds on other mosquito species.

Crane flies can be small to large insects- topping out at about 1 inch, with long, slender legs, and a V-shaped suture on the thorax (body section behind the head). Legs tend to break off very easily, so you may often encounter these insects with less than their allotted amount of 6 legs (see image). Adults can be mistaken for giant mosquitoes and may frighten people.

Crane fly larvae are found in moist soil feeding on decaying organic matter. The larvae are wormlike, legless, and without well-developed heads. Some species feed on roots of turfgrass or other plants, but usually do not cause enough damage to be considered a pest.

In Texas, crane flies become abundant in the spring. While adults may be a nuisance when entering homes or disturbing outdoor activities, they do not cause damage and do not bite. Keep doors and windows closed and make sure screens are in good repair. Either turn off outside lights at night or use “bug bulbs” to reduce the number of crane flies drawn near the home because of light sources.

For more information or help with identification, contact Wizzie Brown, Texas AgriLife Extension Service Program Specialist at 512.854.9600. Check out my blog at www.urban-ipm.blogspot.com
