THE VOICE

A Newsletter for the Teravista Community

The Voice is a monthly newsletter mailed to all Teravista residents. Each newsletter will be filled with valuable information about the community, local area activities, school information, and more.

If you are involved with a school group, play group, scouts, sports team, social group, etc., and would like to submit an article for the newsletter, you can do so online at www.PEELinc.com. Personal news (announcements, accolades/ honors/ celebrations, etc.) are also welcome as long as they are from area residents.

GO GREEN! Subscribe via Peelinc.com to have an email sent to you with a link to a PDF of the newsletter, or have an email sent to you instead of having a newsletter mailed to you!

INTRODUCING GET TO KNOW YOUR NEIGHBORS

home. But, Teravista is more than just a place We have created a column entitled, "Get to live; it is a vibrant community brimming to Know Your Neighbors" which we hope with family-friendly neighborhoods, will strengthen connections, build trust in chock-full of fascinating, talented people. Our variety is what makes us so both happier neighborhood for everyone. unique and extraordinary. However, sometimes, we get so busy, we lose sight of how interesting and diverse we've become.

We believe that getting to know the people who live nearby will help us create

We are all very fortunate to call Teravista a sense of belonging and shared identity. our wider community, and contribute to a

> If you know of a person or a family that you believe is making Teravista a better place to live, please let us know. We would like to introduce them to your neighbors.

HEART GALLERY CENTRAL TEXAS

Meet Chasity, 11, she is waiting for a forever family. Chasity is a sweet and kind young girl. She is somewhat shy but likes being around others. She is very comfortable around those who are caring and affectionate toward her. She is very polite and will use 'please', "thank you", and "sorry". Chasity greatly enjoys being outdoors, and she especially likes going to the water park. She loves coloring and showing off her work. Chasity has development, emotional, and learning disabilities and receives special education services. She loves praise and likes to let everyone around know when she is able to accomplish a task. She is working on becoming more independent and pushes towards doing things on her own.

The Heart Gallery of Central Texas, a program of Partnerships for Children, features portraits of Central Texas children in the foster care system who are available for adoption. Working together, our community raises awareness around adoption, foster care and permanency.

AERATION NOW CAN HELP YOUR SPRING AND SUMMER IRRIGATION

In order to prepare your lawn for a healthy spring growing season, you should employ basic lawn care practices at this time of year, which includes aerating your yard. It is important that nutrients reach the soil beneath your grass, and aeration can help you get that done.

Aeration involves making small holes in the soil to allow air, water and nutrients to get to the grass roots.

This helps the roots grow deeper and produce a stronger, more vibrant lawn.

Aerating helps alleviate soil compaction. Compacted soils have too many solid particles in a space, which prevents proper circulation of air, water and nutrients within the soil. Excess lawn thatch or heavy organic debris buried under the grass surface can also starve the roots from these essential elements.

So when is the right time to get this aeration done? These next six to eight weeks leading up to the spring season, when grass begins to grow again, is a good time to aerate.

The two main aeration tools are the spike aerator and a plug aerator. The spike aerator poke holes in the ground with a solid piece of metal. Plug aerators remove a core or plug of grass and soil

from the lawn. Most landscaping companies and horticulturists recommend the use of the plug aerator. The machines can be rented or you can have a lawn care service aerate for you. After aerating, it's always a good idea to apply about a half-inch of compost over the aerated yard. The compost fills in the holes left by the plug aerator and brings organic materials into the root zone.

If you have noticed that your turfgrass isn't looking its best or (Continued on Page 4)

THE VOICE

(Continued from Page 3)

that water has difficulty penetrating through the soil surface, it may be time to aerate your lawn. Lawns with clay soils that get a lot of foot traffic typically require aeration more often as they become compacted over time. Here's a great tip to check to see if your yard needs to be aerated.

Using a shovel, dig a square-foot section of grass about six inches deep and take a look at it. If the grass roots don't extend further than two inches deep into the soil, your lawn would benefit from aeration.

If you plan to aerate your own yard, here are a few helpful tips to get the job done.

- Before you get started, make sure the soil is moist enough. There's nothing more frustrating than trying to aerate soil that is bone dry. Aerating the day after a rain shower or watering your lawn the day before is advised.
- Most aeration machines cover only a small percentage of soil surface per pass, so make multiple passes over the most compacted areas. Save resources (and your energy) by leaving unaffected areas alone.
- The soil plugs can be left on the ground after aeration and allowed to decompose. Or, you can rake them into piles to throw in the compost bin. However, this isn't necessary as it should take

about two to four weeks for the soil cores to break down naturally. Sprinkle compost (sand or peat moss can be used instead of compost) over the lawn to fill in the holes.

• An aeration myth is that if you apply a pre-emergent herbicide on your lawn in the spring, aerating your lawn will destroy the herbicide "barrier." This is not true — research shows that aeration will not affect crabgrass control or weed prevention.

After aerating, it's important to continue appropriate lawn care practices.

Aerating will help you save water over the spring and summer seasons. Instead of running off or only penetrating a few inches, water will be better absorbed in an aerated yard. That makes your entire landscape and your water bill happier.

Did you know...

According to the U.S. Environmental Protection Agency, outdoor water use varies greatly depending upon geographic location. In dry climates such as that in the Trinity Glen Rose District, a household's outdoor water use can be as high as 60 percent. Some experts estimate that as much as 50% of that irrigation water is wasted due to inefficient watering techniques, wind and evaporation.

March Gardening To Do List

Plant: ornamental & wildlife

- Annuals: It's a tricky month for annuals since we get hot days. But the soil is still cold and freezes could still arrive. Late: plant cosmos, sunflowers, morning glory, gomphrena but keep an eye on upcoming freezes. Avoid planting caladiums.
- Wildflower transplants: early in month, you can still plant bluebonnet, larkspur, poppy and other transplants.
- Perennials & vines
- Ornamental (clumping) grasses like muhly and Mexican feather grass (late month)
- Trees, shrubs, roses (as soon as possible before heat sets in)

Plant: herbs

• Nasturtiums, chives, catnip, comfrey, fennel, horseradish, feverfew, oregano, thyme, rosemary, Mexican mint marigold, peppermint, lemongrass (after last freeze)

Prune

- Roses (early)
- Evergreen shrubs
- Prune dormant perennials and ornamental (clumping) grasses.
- Trees: DO NOT prune red oaks and live oaks unless damaged. Spray immediately with clear varnish.
- No need to apply pruning paint to other trees
- Avoid topping crape myrtles: simply remove sprouts or entire limbs at the trunk.

Divide/Move

• Dormant perennials, roses, shrubs and trees. Still time, but don't wait!

Fertilize

- Citrus with high nitrogen fertilizer like Citrus-tone. Fertilize every few weeks through growing season.
- Add compost to beds as you cut back dormant perennials. Fertilize with slow-release granular late in the month or as dormant perennials leaf out
- Add compost around trees and fertilize. Be sure to dig out grass several feet from the trunk, ideally to the drip line of the tree canopy.
- Watch for powdery mildew. Apply a natural fungicide like Serenade.

Lawn

- Mow weeds before they set seed. Do not fertilize at this time except with compost!
- Plant other turf late in month once freezes aren't coming

Prep

- Add compost to vegetable gardens along with organic fertilizer in prep for more summer crops
- Soil test

(Continued on Page 6)

THE HISTORY AND LEGEND OF SAINT PATRICK'S DAY

The person who was to become St. Patrick, the patron saint of Ireland, was born in Wales about AD 385. His given name was Maewyn, and he almost didn't get the job of Bishop of Ireland because he lacked the required scholarship. Far from being a saint, until he was 16, he considered himself a pagan. At that age, he was sold into slavery by a group of Irish marauders that raided his village.

During his captivity, he became closer to God. He escaped from slavery after six years and went to Gaul where he studied in the monastery under St. Germain, Bishop of Auxerre for a period of twelve years. During his training he became aware that his calling was to convert the pagans to Christianity. His wishes were to return to Ireland, to convert the native pagans to Christianity. But his superiors instead appointed St. Palladius. But two years later, Palladius transferred to Scotland. Patrick, having adopted that Christian name earlier, was then appointed as second Bishop to Ireland.

Patrick was quite successful at winning converts. And this fact upset the Celtic Druids. Patrick was arrested several times but escaped each time. He traveled throughout Ireland, establishing monasteries across the country. He also set up schools and churches which would aid him in his conversion of the Irish country to Christianity. His mission in Ireland lasted for thirty years. After that time, Patrick retired to County Down. He died on March 17 in AD 461.

That day has been commemorated as St. Patrick's Day ever since. Much Irish folklore surrounds St. Patrick's Day. Not much of it is actually substantiated. Some of this lore includes the belief that Patrick raised people from the dead. He also is said to have given a sermon from a hilltop that drove all the snakes from Ireland. Of course, no snakes were ever native to Ireland, and some people think this is a metaphor for the conversion of the pagans. Though originally a Catholic holy day, St. Patrick's Day has evolved into more of a secular holiday.

One traditional icon of the day is the shamrock. And this stems from a more bona fide Irish tale that tells how Patrick used the three-leafed shamrock to explain the Trinity. He used it in his sermons to represent how the Father, the Son, and the Holy Spirit could all exist as separate elements of the same entity. His followers adopted the custom of wearing a shamrock on his feast day. The St. Patrick's Day custom came to America in 1737. That was the first year St. Patrick's Day was publicly celebrated in this country, in Boston.

(Continued from Page 5)

Other tasks

- Keep floating row cover available; avoid covering plants with plastic
- Mulch, but avoid touching the base of trees and roses
- WEED!

Tips

- When planting, dig hole twice as wide as root ball but no deeper than where it sits in the pot.
- Backfill and water until it sinks in.
- Continue filling in.
- Water again until it sinks in and pack the soil down.
- Mulch.
