Albion Hurricanes FC

Albion Hurricanes FC (AHFC), established in 1989, is leading the way in South Texas youth soccer by inspiring and developing young men and women through world class coaching and innovative techniques, as well as instilling the proper framework, self-esteem, confidence and sportsmanship within our athletes.

The club invites all interested competitive players from the ages of 7 to 19, to the Player Evaluations & Tryouts and to become part of our success. AHFC competitive evaluations will be in May**. We ask that all interested players pre-register before coming out to the fields. Please visit albionhurricanes.org for details about your particular campus.

AHFC also offers JHSL (a recreational program for 5 - 10 year old) at our Cy Fair and Central locations and offers additional training at Katy Friday Night Academy as well at Thursday Night Academy for players in the New Territory area

Visit albionhurricanes.org to register and for times and dates.

IS IT A FROG OR A TOAD? How to tell the difference

By Cheryl Conley, TWRC Wildlife Center

Did you know there are 30 different species of frogs and toads in Texas? The problem I have, however, is telling the difference between a frog and a toad. Can you tell the difference?

First, let's explore the similarities. Both frogs and toads are members of the amphibian class. Both have short bodies, two hind legs, two front arms and a wide head. Both frogs and toads are carnivorous and eat worms, insects, slugs, spiders and small fish. Toads may also eat dog food left outside. They catch their prey with their long, sticky tongues. Females lay their eggs close to water or actually in the water and the males fertilize them.

DIFFERENCES:

- If you look at the hind legs, you'll notice the frog has very long legs. They need longer legs because they hop more and higher than toads. Toads tend to crawl more. They can hop but they can't hop very high or very far.
- The frog spends most of its time in the water so it has webbed back feet. Sometimes the front feet are webbed as well.
- Toads have a chubbier appearance than frogs.
- The skin of the frog is much smoother. A toad's skin will be bumpy and the bumps resemble warts.
- The coloring between frogs and toads is different. Frogs are a bright green or a yellow-olive in color. Toads are a dark green to an olive green in color. Make sure you don't rely solely on coloring when trying to identify an animal though because there are some brownish green frogs.
- Frogs spend the majority of their time near water and rarely venture very far away from a water source.

During breeding season, frogs can be incredibly noisy. If you have security lights around your home, these lights will attract insects which will in turn attract frogs who want to eat them. If the noise bothers you, turn out the lights.

If you have pets, don't allow them to play with toads. When toads are threatened or bitten, they use the same defense mechanism as a skunk. The skin lets out a bitter taste and odor

that burns the eyes and nostrils. It is highly toxic to pets and can cause death if left untreated. Humans, however, are not affected by a toad's toxin. If your pet has been outside and you notice it pawing at its mouth or eyes, crying or whimpering, it may have encountered a toad. Other signs to look for:

- Excessive drooling
- Seizures
- Yellow vomit
- Diarrhea
- Dilated pupils
- Irregular heartbeat
- Foaming at the mouth
- Hyperthermia
- Collapse
- Difficulty breathing

If you think your pet has had an encounter with a toad, contact your veterinarian immediately.

Dreams Have no Travel Limitations!

Our foreign exchange students have the dream to study in the US, and they HOPE that they can come this fall. Let's keep their dreams alive and show them they are welcome and wanted if it becomes possible for the come.

Now more than ever, is the perfect time to sign up to host an exchange student. Students from around the world are still holding onto their dreams of spending a year in the USA! Help make that dream come true today. It is true we cannot predict the future, but these students are hoping to be able to come in August. It would make them very happy to know someone here WANTED them.

Each of our students is fluent in English, comes with their own spending money and health insurance. Most importantly, they come with a dream to spend a year in the US so they can experience life as an American teenager!

STS Foundation accepts all of host families – from single parents, newly marrieds, empty nesters and same sex couples. In order to host, you would need to meet the following qualifications:

- Host must be 25 years or older
- Pass a background check
- Provide food for 3 meals daily

- Ensure reliable transportation to and from school (bus is ok)
- A bed for your student
- A safe and loving home

STS Foundation is a 501(c)(3) organization that places foreign exchange students with American host families. For more information about hosting, please contact me at 832-455-7881 PM me or email at vicki.stsfoundation@yahoo.com.

OUTSMARTING CANCER

in Northwest Houston

Willowbrook • Cypress • Spring • Tomball

Our nationally recognized specialists are finding new ways to outsmart cancer.

From screenings and diagnosis to the most advanced treatments, our leading cancer care is available at our Willowbrook location, which also serves the Cypress, Spring and Tomball communities. We offer personalized guidance and support, so you can focus on healing, surviving and thriving.

RECIPE OF THE MONTH

Watermelon Salad

- 2 tablespoons white wine vinegar
- 1 lime, zested and juiced
- 1/4 cup extra-virgin olive oil
- 1 red onion, thinly sliced
- 4 cups seeded watermelon chunks
- 1 cup crumbled feta cheese
- 1/4 cup mint chiffonade
- 2 cups baby arugula

Directions:

Add the white wine vinegar, lime zest and juice to a small bowl. Whisk in the olive oil and season with salt and pepper. Add the thinly sliced red onion and let marinate for 5 to 10 minutes as you prepare the rest of the salad.

Add the watermelon, feta, mint, and arugula to a large bowl. Toss with the vinaigrette and serve immediately after dressing.

Crape Myrtle Bark Scale

Crape myrtles are a popular landscape tree in parts of Texas, prized for their beauty. While this tree has been relatively maintenance free for years, that is no longer the case now that crape myrtle bark scale (CMBS) has been found in Texas.

Crape myrtle bark scales are small, wingless insects, pinkish in color and covered with a white, velvety covering. When you look at the bark of an infested tree, look for round to oval shaped white velvety insects. If you puncture one with a toothpick, it will exude a pink substance.

When inspecting crape myrtles for CMBS, look along trunks, limbs, as well as smaller twigs and branches found towards the top of the tree. You'll want to look for scale insects and sooty mold. Sooty mold is a black colored fungus that grows on honeydew; honeydew is an excretion from scale insects (and other small, soft-bodied insects such as aphids and mealybugs).

Heavily infested crape myrtles have CMBS that produce copious amounts of honeydew on the tree and surrounding area which leads to growth of sooty mold, turning landscape plants black. Infested crape myrtles produce fewer and smaller blooms which may be difficult to tell unless you have an uninfested tree to compare.

Only male crape myrtle bark scales fly. Others are dispersed by wind, birds, other insects, or landscape maintenance equipment to nearby areas. Long-distance transport occurs via infested material. Once CMBS are in an area, they can move onto to nearby trees.

Control options are varied for CMBS. There are lady bugs that eat CMBS, but this may take time for control as the ladybug population is tied to the population of insects they feed upon. Ensure that if you buy and plant crape myrtles, that you inspect them and not plant any infested trees, or you select a different species of tree or shrub for the landscape.

Pesticide treatment for crape myrtle bark scale can be done with either a contact spray or a systemic. Studies from TAMU discovered that contact sprays should be used when pest numbers are peaking (crawler/ nymph numbers peak mid-April through May), and two treatments should be done with the second treatment taking place 2 weeks after the initial treatment. Insecticides with bifenthrin as the active ingredient tend to work best.

Systemic treatments should be applied earlier, when the leaves are budding out. Systemics such as imidacloprid and dinotefuran are best used as a soil treatment in March so that they are taken up by the tree and in place for the crawler population in April-May. These products should be used when trees are NOT in bloom to protect pollinators.

For a video on how to treat crape myrtles for CMBS, you should go to this link:

<https://citybugs.tamu.edu/2018/08/28/how-to-treat-your-crapemyrtle-for-bark-scale/>

For more information or help with identification, contact Wizzie Brown, Texas AgriLife Extension Service Program Specialist at 512.854.9600. Check out my blog at www.urban-ipm.blogspot.com
